

**Project description:** How does vowels in bilingual speakers (in my case, English and French) change from normal speech to high articulated speech between languages?

**Instructions:** For each language, record three (3) separate times: 1<sup>st</sup> time as a test run to get comfortable with the sentences, 2<sup>nd</sup> time as though you are talking to a friend (very layback), 3<sup>rd</sup> speak as clear as possible as if you are talking to someone of hard of hearing. Please leave a pause in between each sentence and a small pause from “is”/“est” and the last word in the sentence.

Once you are ready, please scroll down to the next page.

Merci encore,

Luc

**English:**

1. The word is see
2. The word is be
3. The word is he
4. The word is key
5. The word is pea
6. The word is fee
7. The word is tea
